I started learning frontend almost one and half year, during this period I explored many areas of frontend. While exploring, I learned basic frontend skills and created projects. I am very interested when talking about frontend. That's why I think if I do this internship, my skills will increase, so I am very serious about this internship.

EDUCATION

Bachelor's in BSc CSIT

Kathmandu, Nepal

Asian School of Management & Technology

Jan, 2022 - Present

The school gave me a lot of knowledge about technology so I have improved my frontend skills.

PROJECTS

Crypto App

This is a crypto app where I have implemented hooks like useState and useEffect to manage the data. Chakra UI is used to make the website responsive for both larger and smaller screens. An API is utilized to fetch live prices of cryptocurrencies. Users can view the prices in three different currencies: dollars, euros, and Indian rupees.

Video-hub

In the video-hub app, I utilized various React concepts such as useState and useEffect. One of the key highlights of this project is the implementation of Chakra UI, which ensured the website's responsiveness on both small and large screens.

Plaza App

In this project, I have used simple React technology that includes various functions and dependencies.
